Hello wonderful AP Stats students! Your spring break assignment is a Barron's workbook assignment.

**Barron's review (50 points—25 points per test)**
By now we should be ready to take practice AP Statistics exams.

Before you begin taking a practice exam, be sure you can commit to 4-4.5 hours to complete the entire test. It is extremely important that you finish the test in one sitting because if you finish the exam in multiple sessions, you will fail to experience the rigor of taking a full-length AP Statistics exam. Remember, whether or not you are taking the AP Statistics Exam, our final exam will be a full-length practice AP Statistics Exam so you definitely want to get some practice taking a full-length AP test. The formula sheets and tables are listed beginning on page 588 for the 7th edition, page 586 for the 8th edition, page 620 for the 9th edition in the Barron's book.

a) Turn to page 441 (7th), 425 (8th), or 453 (9th) in your Barron’s book and complete Practice Examination 1 in about three hours. **Show all of your work** on your own paper (for both multiple choice and free response questions), which you will turn in, and then **grade your work** and make corrections in a different colored pen according to the rubric in the Barron’s book. When finished, turn to page 585 (7th), 583 (8th), or 611 (9th) in the Barron’s book and **calculate your score** to get an idea of how you would have done on the actual AP test. One last thing, for each multiple-choice question that you got wrong, you MUST review the unit/topic corresponding to the question that you missed. Turn to page 579 (7th), 578 (8th), or 606 (9th) in the Barron’s book where each multiple choice question and its corresponding unit/topic are listed. Turn to the appropriate page in the Barron’s book to review each unit that you had trouble with.

b) Turn to page 469 (7th), 455 (8th), or 483 (9th) and complete Practice Examination 2 as described above. Please be sure set aside about 3 contiguous hours to complete the test and about another 1½ hours to grade the test and check your score. After completing the exam, review the sections that correspond to the multiple-choice questions you missed.

I hope that you all take this assignment seriously as it is worth a test grade, but more importantly it should help get us all prepared to pass the AP Statistics Exam. Good luck!

Mr. Brinkhus
